

How to print your art

Thank you for your purchase! Your files are true 300 DPI JPGs — they'll print crisp at every size listed below. Three ways to get them on your wall, easiest first:

Option 1 — Online print service (easiest, best value)

1. Upload the JPG to any poster/photo print service (search "poster printing" — most photo labs, pharmacy photo counters, and online poster shops work).
2. Choose a size from the matching ratio folder (chart below). Pick **matte or lustre** paper for this collection's soft, textured look.
3. If asked, choose "shrink/fit to page" OFF and "crop to fill" ON — the file is already exactly the right proportions.

Option 2 — Local print shop

Bring the JPG on a USB stick or email it. Ask for: "300 DPI poster print, [size], matte paper." Print shops can also print A1/24×36" statement sizes and mount on foam board.

Option 3 — Home printer

Print the 4:5 or ISO-A file on A4/letter cardstock (matte, 200 gsm+ if your printer accepts it). Set print quality to "high/photo," and margins to borderless if supported.

Which folder for which frame?

Folder	Prints perfectly at
2x3 (file: 7200×10800 px)	4×6", 8×12", 12×18", 16×24", 20×30", 24×36"
3x4 (file: 5400×7200 px)	6×8", 9×12", 12×16", 18×24"
4x5 (file: 4800×6000 px)	4×5", 8×10", 11×14*, 12×15", 16×20"
11x14 (file: 3300×4200 px)	11×14" exactly (a very common frame size)
ISO-A (file: 7016×9933 px)	A5, A4, A3, A2, A1 (international/IKEA frames)

*11×14 has its own folder because it's not quite 4:5 — use the dedicated file for zero cropping.

Frame + mat tip: these designs breathe best with a white or off-white mat in a thin black, oak, or walnut frame. Buying frames first? 16×20" frame with an 11×14" mat opening is the classic gallery look — print the 11×14 file.

Hanging your set

- **Trio in a row:** same frame size, 2–3" gaps, centers at 57–60" from the floor.
- **Gallery six:** 2 rows × 3, or a loose organic cluster — keep gaps consistent (2–3") and the overall shape roughly rectangular.
- **Above bed/sofa:** art should span roughly $\frac{2}{3}$ the width of the furniture below it; leave 8–10" between headboard and frame bottom.

Troubleshooting

- **Print looks soft?** Confirm the shop didn't downscale — the files are 300 DPI at the largest size in each folder; no service should ever ask for "higher resolution."
- **Colors slightly different than screen?** Normal — screens are backlit, paper isn't. Matte paper + "no auto-enhance" gives the truest result.
- **Need a size not listed?** Message me through Etsy — custom ratios are usually a same-day add.

Kaze Collection · Original designs, personal use only (no reselling or redistribution of files or prints). Questions? Message the shop — happy to help. ◦ Thank you for supporting independent design.
